

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A printing system including a server and a printer which can be communicate with said server,

wherein said server comprises:

a location data storage that stores a list of location data of both print data to be printed by said printer and unprintable data which cannot be printed by said printer; ~~and~~

a data transmitting system that transmits the list of location data of both the print data and the unprintable data to said printer in response to a specific request of the list of location data received from said printer,

wherein said printer comprises:

a location data requesting system that transmits the specific request for the list of location data to said server;

a location data receiving system that receives the list of location data transmitted by said data transmitting system; ~~and~~

an extracting system that extracts the list of location data of the print data from the list of location data received by said location data receiving system;

a displaying system that displays the list of location data of only the print data extracted by said extracting system;

a designating system operable to designate one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed by said displaying system;

an obtaining system that obtains the print data from the location designated by said designating system; and

_____ a printing device that ~~obtains the print data from the location indicated by the list of location data received by said location data receiving system and prints out the~~ obtained print data obtained by said obtaining system.

2. (Previously Presented) The printing system according to claim 1, further comprising a location data updating system that updates the list of location data stored in said location data storage, said location data updating system being provided in at least one of said server, said printer and a device communicably connected with said server.

3-7. (Canceled)

8. (Currently Amended) A printing system including a server and a printer which can be communicate with said server,

wherein said server comprises:

a data storage that stores both print data to be printed by said printer and unprintable data which cannot be printed by said printer;

_____ an extracting system that extracts the print data based on the data stored in said data storage in response to a specific request for the list of location data received from said printer;

a location data generating system that generates a list of location data of the print data extracted by said extracting system~~based on the data stored in said data storage;~~ and

a data transmitting system that transmits to said printer the list of location data of only the print data generated by said location data generating system~~to said printer in response to a specific request of the list of location data received from said printer,~~

wherein said printer comprises:

a location data requesting system that transmits the specific request for the list of location data to said server;

a location data receiving system that receives the list of location data transmitted by said data transmitting system;~~and~~

a displaying system that displays the list of location data of only the print data extracted by said extracting system;

a designating system operable to designate one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed by said displaying system;

an obtaining system that obtains the print data from the location designated by said designating system; and

a printing device that ~~obtains the print data from the location indicated by the list of location data received by said location data receiving system and~~ prints out the obtained print data obtained by said obtaining system.

9. (Original) The printing system according to claim 8, further comprising a data updating system that updates the data stored in said data storage, said data updating system being provided in at least one of said server, said printer and a device communicably connected with said server.

10-14. (Canceled)

15. (Currently Amended) A printer communicable with a server, comprising:

a location data requesting system that transmits a specific request for the list of location data to the server;

a location data receiving system that receives the list of location data transmitted by the server;~~and~~

an extracting system that extracts the list of location data of print data to be printed by a printer from the list of location data received by said location data receiving system;

a displaying system that displays the list of location data of only the print data extracted by said extracting system;

a designating system operable to designate one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed by said displaying system;

an obtaining system that obtains the print data from the location designated by said designating system; and

a printing device that obtains the print data from the location indicated by the list of location data received by said location data receiving system and prints out the obtained print data obtained by said obtaining system.

16. (Currently Amended) A server communicably connected with a printer, comprising:

a location data storage that stores a list of location data of both print data to be printed by the printer and unprintable data which cannot be printed by said printer; and

an extracting system that extracts the list of location of the print to be printed by said printer from the list of location data stored in said location data storage in response to a specific request for the list of location data received from said printer;

a data transmitting device that transmits to the printer the list of location data of only the print data extracted by said extracting system to the printer in response to a specific request of the list of location data received from the printer.

17. (Currently Amended) A server communicably connected with a printer, comprising:

a data storage that stores both print data to be printed by the printer and unprintable data which cannot be printed by said printer;

an extracting system that extracts the print data based on the data stored in said storage in response to a specific request for the list of location data received from said printer;

a location data generating system that generates a list of location data of only the print data extracted by said extracting~~based on the data stored in said data storage~~; and

a data transmitting device that transmits the list of location data generated by said location data generating system to the printer in response to a specific request of the list of location data received from the printer.

18-21. (Canceled)

22. (Previously Presented) The printing system according to claim 1, wherein the list of location data comprises a list indicating storage locations of a plurality of pieces of print data.

23. (Previously Presented) The printing system according to claim 1, wherein the list of location data is document data different from the print data.

24. (Previously Presented) The printing system according to claim 1, wherein the location data requesting system transmits the request for the list of location data to the server when the printer receives an instruction to display the list of file names of the print data by a user operation.

25. (New) A printing system including a server and a printer which can be communicate with said server,

wherein said server comprises:

a location data storage that stores a list of location data of both print data to be printed by said printer and unprintable data which cannot be printed by said printer;

an extracting system that extracts the list of location data of the print data from the list of location data in response to a specific request for the list of location data received from said printer; and

a data transmitting system that transmits to said printer the list of location data of only the print data extracted by said extracting,

wherein said printer comprises:

a location data requesting system that transmits the specific request for the list of location data to said server;

a location data receiving system that receives the list of location data transmitted by said data transmitting system;

a displaying system that displays the list of location data of only the print data received by said location data receiving system;

a designating system operable to designate one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed by said displaying system;

an obtaining system that obtains the print data from the location designated by said designating system; and

a printing device that prints out the obtained print data obtained by said obtaining system.

26. (New) A printing system including a server and a printer which can be communicate with said server,

wherein said server comprises:

a data storage that stores both print data to be printed by said printer and unprintable data which cannot be printed by said printer;

a location data generating system that generates a list of location data of both the print data and the unprintable data based on the data stored in said data storage in response to a specific request for the list of location data received from said printer; and

a data transmitting system that transmits the list of location data generated by said location data generating system to said printer in response to a specific request of the list of location data received from said printer,

wherein said printer comprises:

a location data requesting system that transmits the specific request for the list of location data to said server;

a location data receiving system that receives the list of location data transmitted by said data transmitting system;

an extracting system that extracts the list of location data of the print data from the list of location data received by said location data receiving system;

a displaying system that displays the list of location data of only the print data extracted by said extracting system;

a designating system operable to designate one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed by said displaying system;

an obtaining system that obtains the print data from the location designated by said designating system; and

a printing device that prints out the obtained print data obtained by said obtaining system.

27. (New) A method of printing data with a server and a printer which can be communicate with said server with the server including a location data storage that stores a list of location data of both print data to be printed by said printer and unprintable data which cannot be printed by said printer, comprising:

transmitting a specific request for the list of location data to said server;

transmitting the list of location data of both the print data and the unprintable data to said printer in response to the specific request of the list of location data received from said printer,

receiving the list of location data transmitted;

extracting the list of location data of the print data from the list of location data received;

displaying the list of location data of only the print data extracted;

designating one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed;

obtaining the print data from the location designated; and

printing out the obtained print data obtained by said obtaining system.

28. (New) A method of printing data with a server and a printer which can be communicate with said server, with the server including a data storage that stores both print data to be printed by said printer and unprintable data which cannot be printed by said printer, comprising:

transmitting a specific request for a list of location data to said server;

extracting the print data based on the data stored in said data storage in response to the specific request for the list of location data received from said printer;

generating a list of location data of the print data extracted;

transmitting to said printer the list of location data of only the print data generated;

receiving the list of location data transmitted;

displaying the list of location data of only the print data extracted;

designating one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed;

obtaining the print data from the location designated; and
printing out the obtained print data obtained.

29. (New) A method of printing data with a server and a printer which can be communicate with said server, with the server including a location data storage that stores a list of location data of both print data to be printed by said printer and unprintable data which cannot be printed by said printer, comprising:

transmitting a specific request for the list of location data to said server;
extracting the list of location data of the print data from the list of location data in response to the specific request for the list of location data received from said printer;
transmitting to said printer the list of location data of only the print data extracted;
receiving the list of location data transmitted;
displaying the list of location data of only the print data received;
designating one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed;
obtaining the print data from the location designated; and
printing out the obtained print data obtained.

30. (New) A method of printing data with a server and a printer which can be communicate with said server, with the server including a data storage that stores both print data to be printed by said printer and unprintable data which cannot be printed by said printer, comprising:

transmitting a specific request for a list of location data to said server;
generating a list of location data of both the print data and the unprintable data based on the data stored in said data storage in response to the specific request for the list of location data received from said printer;

transmitting the list of location data generated to said printer in response to the specific request of the list of location data received from said printer;

receiving the list of location data transmitted;

extracting the list of location data of the print data from the list of location data received;

displaying the list of location data of only the print data extracted;

designating one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed;

obtaining the print data from the location designated; and

printing out the obtained print data obtained.

31. (New) A computer accessible recording medium storing a program to be executed by a computer of a printer communicable with a server, the program comprising instructions for:

transmitting a specific request for a list of location data to the server;

receiving the list of location data transmitted by the server;

extracting the list of location data of print data to be printed by a printer from the list of location data received;

displaying the list of location data of only the print data extracted;

designating one of a plurality of locations by a user operation, the plurality of locations being indicated by the list of location data of the print data displayed;

obtaining the print data from the location designated; and

printing out the obtained print data obtained.

32. (New) A computer accessible recording medium storing a program to be executed by a computer of a server communicable with a printer, the program comprising instructions for:

storing a list of location data of both print data to be printed by the printer and unprintable data which cannot be printed by said printer; and

extracting the list of location of the print to be printed by said printer from the list of location data stored in response to a specific request for the list of location data received from said printer;

transmitting to the printer the list of location data of only the print data extracted.

33. (New) A computer accessible recording medium storing a program to be executed by a computer of a server communicable with a printer, the program comprising instructions for:

storing both print data to be printed by the printer and unprintable data which cannot be printed by said printer;

extracting the print data based on the data stored in response to a specific request for the list of location data received from said printer;

generating a list of location data of only the print data extracted; and

transmitting the list of location data generated to the printer in response to a specific request of the list of location data received from the printer.
